Update adds benefits

OJ Air2 and OJ Air Cloud®

To ensure close monitoring of the AHU and a shorter response time for service providers, the OJ Air2 controller and OJ Air Cloud® have been updated, allowing you to offer decentralised monitoring, testing, and critical adjustment to service providers.

Everybody benefits from the update

- Facility managers can ensure more hours of flawless performance and reduce hours of redundant control and tests.
- Service providers will be able to foresee problems and solve sudden issues faster, allowing them to service more customers, using the same staff.
- AHU manufacturers will likely be able to reduce expenses on warranty cases, as problems are far easier to solve remotely. This makes happy and loyal contractors and building developers and retain good customer relations.

VCH turns into

A Full Series of Ventilation Controllers

Regulate fans and dampers to ensure a constant flow

Perhaps you are already familiar with the VCH-3202-DI. It has a one-setpoint option and is often used to regulate fans and dampers, ensuring constant air flow/pressure in ducts in, for example, apartment blocks.

Create four setpoints and control ventilation manually

The new VCH-3212-DI allows you to create four user-defined setpoints. This is ideal for areas or buildings where manual control of the ventilation is required – e.g., in industrial kitchens.

Demand ventilation control with multiple setpoints

With the equally new VCH-3222-DI controller, you can establish ventilation systems with stepless setpoints. Reacting seamlessly to a 0-10 V signal, you can, for example, connect a CO₂ sensor and offer truly advanced ventilation. With countless setpoints available, this unit can ensure optimal airflow and constant CO₂ levels in classrooms or offices.

Zone Controls for VAV Systems

OJ GreenZone™ HVAC zone control

OJ GreenZone™ is an intelligent and highly efficient answer to modern HVAC zone control. A combination of master controls, modules and room panels gives you complete control of each individual room or zone in your building's VAV system – whether that system is based on AHUs fitted with controls from OJ Electronics or from another manufacturer. With an OJ GreenZone™ zone controlled VAV system you can create and maintain the exact air quality and temperature you want in up to 125 individual rooms or zones.

Control up to 125 VAV zones

Each OJ GreenZone™ Master is an electronic controller capable of controlling up to 25 VAV zones in a ventilation system by means of an OJ GreenZone™ Module. And you can connect up to five Masters in a fully expanded system, bringing the total number of individual zones up to 125.

OJ AIR Controls for Compact AHU's

This is the AHU controller for smaller-scale ventilation applications. Here you get genuine OJ quality at cost-efficient prices: the AHC-3000 offers all the standard functions required by most of your customers – and pre-programmed add-on options makes the system entirely scalable while avoiding the costs of customised programming.

A simpler controller

Simple, straightforward controller designed for smaller system types such as decentral ventilation and compact air handling units – and it also lets you benefit from the equally new OJ Air Cloud® system. Here, OJ quality meets cost-efficiency. We believe that this will help you create even more competitive solutions – and reach new markets for smaller-scale systems.

OJ Air Pressure

The OJ Air Pressure range packs four decades of application know-how into smart, simple ventilation controllers and pressure transmitters to fit your specific application needs. This range has exactly what you need to monitor and control air flow and pressure. Anywhere at all. And with astounding accuracy.

Expanded range of pressure transmitters

OJ Electronics was the first to introduce the kind of advanced, easy-to-use and highly accurate pressure transmitters you will find in our PTH series. By popular demand we have expanded that range, creating variants that are ideally suited for a vast selection of applications. You can get pressure transmitters, ventilation controllers, pressure transmitters with relays and dual-input pressure transmitter from us.

Rotary Heat Exchanger Drives & Motors

The DRHX range is based on stepper motor technology and sensorless motor control. It is equipped with a sophisticated software that monitors the rotation of the rotor, which means that no physical/optical rotor guard is required. Instead the DRHX uses the feedback signal from the motor to calculate if the belt is broken, additionally the feedback signal ensure that the motor gets exactly the current it needs to supply the right speed and torque. The DRHX series covers the range from 1Nm to 14Nm with both Modbus and analogue control. Additionally a version with a 3x7-segment display is available. The DRHX range is designed to be very easy to install, compact and flexible as possible. Their small size make

them easy to fit in, and you can place them horizontally or vertically. (Drive, motor and cable shall be ordered individual).

- Energy-optimum recovery
- OJ Air2 compatible
- Gear-free technology ensures accurate control throughout wide speed range.
- Sensorless rotation monitor – no physical/optical rotor guard 'is required.
- Wide product range from 1Nm to 14Nm
- Modbus, 0-10V control and 3x7-segment display

Temperature Controllers

Our standard range of HVAC temperature controllers are our simplest options and very easy to install. We offer several different models, allowing you to control temperatures in AHUs for commercial applications and HVAC systems on any scale. You can explore our basic temperature control range below – and if you want something more advanced, we recommend our OJ Air2 system.

Extensive range for temperature control

The OJ Electronics range for HVAC temperature control includes:

- Air handling controllers
- Temperature controllers for DIN-rail mounting
- Temperature controllers for wall mounting

Simple installation, reliable operation

Turn a knob. That's all you need to do to set these HVAC temperature controllers. There are no web servers involved, no sophisticated functions to remember.

	Product type	Product features / Technical data	EAN-number
	ETN4-1999	Temperature Controller <ul style="list-style-type: none"> • Digital thermostat • Din-rail mount • -19.5°C/70.0°C • 230V, 16A • Incl. NTC12K sensor, 3m 	5703502650289

Power Controllers

Power and step controllers for easy integration with electric heater coils

At OJ Electronics you will find a range of TRIAC controls to control electric heater coils in AHUs. And you will find them easy to work with: each model is designed for easy integration with any range of heater coils for comfort heating.

The OJ range of TRIAC control options includes:

- Power controllers with 1 or 2 phases
- DIN-rail power controller
- Step controls

Accurate and durable electric heat control

The OJ power and step controllers are engineered to give you several benefits, including

- accurate, noiseless control
- long life expectancy

The built-in PID controller makes installation and operation simple, straightforward and reliable, saving you money on installation and power consumption. The TRIAC range starts at 1x16 amps (3.6 kW) and goes all the way up to 2x16 amps (10 kW).

All ETF-xxx/99 sensors (NTC) can be used

Temperature Sensors

The OJ range of electronic temperature sensors are used as signal emitters for electronic thermostats, regulators and thermometers. Many different versions are available, ensuring that you can get a temperature sensor for almost any application. For example, you can get sensors for installation in floors, on walls, in machinery, pipes, in tanks, watertight spaces or outdoor.

Rapid response times

Each of our temperature sensors (known as the ETF series) contains a resistance sensor element (NTC or PT 1000) enclosed in a housing of plastic or metal – and every ETF model has been designed to achieve the shortest possible response times. This is ensured by using resistance sensors that convert temperature into ohmic resistance.

Temperature Transmitters

Our series of Modbus temperature transmitters allows you to measure and control temperatures in your HVAC installations with great accuracy. Available in different mechanical variants to fit ducts or rooms, our Modbus temperature transmitters are very easy to install.

Rapid and efficient response

Our Modbus temperature transmitters deliver the temperature data digitally via Modbus RTU technology. This ensures that measurement accuracy is not reduced by cable losses, bringing you highly reliable data. Your system can respond swiftly and efficiently to adjust temperatures as required.

Temperature transmitters for ducts, rooms or outdoor

Our Modbus temperature sensors come in three variants:

- TTH-6202 – for flexible installation in ventilation ducts, supplied with pre-fitted 7m cable
- TTH-6040-W – a stylish option for wall installation in rooms
- TTH-6040-O – a robust version for outdoor installation.

The sensors feature Modbus RTU connectivity and are fully compatible with advanced system solutions such as OJ Air2.

	TTH-6040-O	Modbus RTU temperature sensor <ul style="list-style-type: none"> • -30/+50°C • Outdoor mounting • Including a junction box for conversion from 4-core cable to modular Modbus cable RJ12 • QuickPlug™ 	5703502907789
	TTH-6202	Modbus RTU temperature sensor <ul style="list-style-type: none"> • -10/+40°C • Duct sensor • 7m cable with RJ12 connector • QuickPlug™ 	5703502903095

Air Quality Sensors

Our VOC air quality sensors allow your air handling system to be demand controlled in accordance with the level of volatile organic compounds (VOCs) in the air. These air quality sensors monitor the air quality in ventilation ducts on the basis of its content of VOCs, which can come from many sources: people, furnishings, cleaning agents, building materials, etc.

The air quality sensor transmits this information via Modbus to your chosen electronic controller (in e.g. PLC, BMS or SCADA systems), allowing it to respond accordingly.

Converts VOC concentrations into CO₂ equivalents

The VTH air quality sensors automatically convert VOC concentration levels into a CO₂ equivalent, which means that you can easily use them instead of CO₂ sensors.

	Product type	Product features / Technical data	EAN-number
	VTH-6202	VOC/ CO ₂ (equivalent) transmitter <ul style="list-style-type: none"> • Ø 19 x 160 mm w. flange for duct mounting • 7m cable with RJ12 connector • QuickPlug™ 	5703502722290
	VTH-6242	VOC/ CO ₂ (equivalent) transmitter <ul style="list-style-type: none"> • Ø 19 x 160 mm w. flange for duct mounting • Connection 4 x 1.5mm² screw terminals 	5703502901787

OJ Air Humidity

The OJ Air Humidity range covers both general and specialized needs. Our HTH series of humidity transmitters are ideal for any application where you need a humidity sensor. Available in versions for installation in rooms or ventilation ducts, these humidity transmitters measure the current air humidity with great accuracy so that your demand-controlled ventilation system can respond quickly and efficiently to changing conditions.

For more specific tasks, we offer our NVP moisture alarm relays as well as our EHP controllers, which are used with analogue humidity transmitters to control humidifiers and/or dehumidifiers.

Measuring humidity and temperature – Modbus output

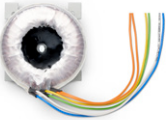

Our HTH-62xx humidity transmitters are designed for duct installation and are capable of measuring humidity and temperature. Data is transmitted via Modbus, and flexible length options make these humidity sensors suitable for ventilation systems on any scale.

The OJ Way

The OJ Way is the unique tie-in of product leadership, global supply chain, perfect platforms for customisation, industry best quality processes, and a diamond partnership in one coherent package.

All processes are focused on the same general goal – to improve the climate – always – through connected electronics solutions.

In this way, we help you differentiate in the market.
